Find the missing numbers on the number line.

Answer key: 1: 0 // 2: -2 // 3: 3 // 4: 5 // 5: -6

There are some numbers missing on our number line. But that's no problem since we can determine them by moving to the left or to the right.

There are two known numbers: -3 and 6 . From one of these numbers, we can move left or right to find out which number belongs in each blank. It makes sense to start with a number we already know.

From -3 we can go three steps to the right to reach one blank. Moving three steps to the right means adding $+3$. So that gives us $-3 + (+3) = -3 + 3 = 0$. In the same way, we can move one step to the left from 6 to reach another blank. This is represented by the expression $6 + (-1) = 6 - 1 = 5$. So the unknown number was 5 .

The other missing numbers were -6 , -2 and 3 .
